

Lecture 6 Live Problems

Insulin–glucose, finished. Separation of time scale. Modeling reflection.

Points toward lab manual pages: **IG5, IG6, IG7, IG8** (section L1 S5)

TO DO: No live problems existed for Lecture 6 in 2025. The following section (IG5–IG8) runs the insulin–glucose simulation and reads trajectories in state space; a natural live problem is to sketch the (G, I) trajectory after a meal by hand before students see the simulator.

1. After a meal. Sketch time series for glucose G and insulin I in the hours after a large meal, then sketch the trajectory in (G, I) state space.
